PROFESSIONAL SUMMARY

Full-stack developer with hands-on backend internship experience in Node.js at Swift Technology Pvt. Ltd (IME Group), combined with independently delivered production-style full-stack systems in C#/.NET, React, and Flutter. Skilled in designing and building REST APIs, relational and NoSQL databases, and containerized cloud deployments. Proficient across JavaScript, TypeScript, Python, Java, and C#, with experience shipping web, desktop, and mobile applications end-to-end from database design through to production deployment. Seeking a backend or full-stack developer role to build scalable, high-quality software and grow continuously by adopting new technologies and engineering best practices.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, C#, Dart, SQL, HTML5, CSS3

Frameworks & Libraries: Node.js, Express.js, React.js, ASP.NET Core, Blazor (Hybrid & Server), .NET MAUI, Flutter, Firebase

Databases & ORMs: MySQL (Sequelize), PostgreSQL, MongoDB (Mongoose), SQLite, Entity Framework Core, Prisma ORM

Cloud, DevOps & APIs: Docker, Git/GitHub, REST, gRPC, WebSockets (Socket.io), CI/CD, Render, AWS

Tools & Platforms: VS Code, Visual Studio, Android Studio, Postman, Swagger UI, Figma

Soft Skills: Communication, Time Management, Teamwork, Problem-Solving, Critical Thinking, Adaptability, Work Ethics

INTERNSHIP EXPERIENCE

Backend Developer Intern — Swift Technology Pvt. Ltd (IME Group) *Sep 8, 2025 – Dec 16, 2025*

Backend Department – Node.js | Kathmandu, Nepal

- Built and maintained REST APIs using Node.js and Express.js with routing, middleware, and JWT-based authentication.
- Worked with MySQL (Sequelize ORM) and MongoDB (Mongoose) for database design, migrations, and CRUD operations.
- Applied TypeScript for type-safe development; documented APIs with Swagger UI; managed version control with Git and GitHub.
- Explored Redis caching, WebSockets, and CI/CD concepts; received commendation from mentor for dedication and teamwork.

PROJECTS

Academic Projects

1. Hamro Pani — Digital Water Distribution & Tracking System

Demo: [[link](#)]

Role: Full-Stack Developer (Final Year Project)

Technologies: Flutter, Dart, Node.js, Express.js, MySQL, Prisma ORM, Socket.io, Firebase (Auth & FCM), eSewa SDK, OpenStreetMap, Jest, Autocannon

- Designed and built a cross-platform mobile app addressing urban water scarcity, connecting Ward Admins, Water Tanker Vendors, and Residents.
- Implemented real-time GPS tanker tracking on OpenStreetMap via WebSockets (Socket.io) with a 15-second REST sync fallback for unstable networks.
- Developed a secure booking engine using Prisma to atomically manage slot capacities, eliminating overbooking and race conditions.
- Integrated eSewa payment gateway with secure backend server-side verification to prevent client-side payment tampering.
- Engineered Firebase-based role-access control (Resident, Vendor, Ward Admin) with custom SQL profile synchronization, plus bilingual (English/Nepali) support.
- Verified performance via Jest/Supertest unit tests and Autocannon load tests — dashboard rendering under 3s, booking submissions under 5s.

2. AutoPart Pro — Enterprise Auto Parts & Service Management System

Demo: [[link](#)]

Technologies: ASP.NET Core (C#), React.js, PostgreSQL, Entity Framework Core, JWT

- Built a secure, role-based ASP.NET Core Web API using Clean Architecture and PostgreSQL, powering an enterprise auto-parts dealership with Administrator, Staff, and Customer portals.
- Implemented JWT authentication, LINQ-driven financial reporting (sales volume, credit limits, margin analysis), and EF Core code-first migrations with automated cloud database seeding.
- Refactored separate frontend and backend repositories into a unified monorepo; configured production environment variables for cloud-ready deployment.

3. MindFlow — Secure Desktop & Web Journaling Application

Demo: [[link](#)]

Technologies: .NET 10, .NET MAUI Blazor Hybrid, ASP.NET Core Blazor Server, Entity Framework Core, SQLite, PostgreSQL (Neon), QuestPDF, Docker

- Built from a single Blazor Hybrid codebase, shipping simultaneously as a native desktop app (.NET MAUI) and a cloud-hosted web app (ASP.NET Core Blazor Server).
- Implemented secure authentication with hashed passwords, rich-text/Markdown journal entries with mood labels, custom tags, and analytics dashboards covering mood trends, streaks, and keyword distribution.
- Engineered a custom PDF export pipeline with QuestPDF/SkiaSharp; containerized with Docker and deployed to Render with a PostgreSQL (Neon.tech) database.

4. Social Media Sentiment Analysis

Technologies: Python, Scikit-learn, Pandas, NumPy, Matplotlib

- Binary sentiment classifier trained on 3,000 labelled sentences from Amazon, IMDb, and Yelp (UCI ML Repository).
- Implemented and compared Multinomial Naive Bayes, Logistic Regression (TF-IDF), and Linear SVM using accuracy, precision, recall, F1-score, confusion matrix, and 5-fold stratified cross-validation.

5. Wellness Multi-Screen Flutter App

Technologies: Flutter, Dart

- Multi-screen Flutter app with custom dark-themed UI (login, sign-up, dashboard, profile, quotes detail); Navigator-based screen transitions, image caching, SVG support, and custom ThemeData.

6. E-Commerce Website for Shopping Mart

Demo: [[link](#)]

Technologies: HTML, CSS

- Developed a fully responsive and mobile-friendly shopping site supporting multi-device access with a clean, modern UI.

Personal Projects

1. Real-Time Chat Application

Technologies: Node.js, TypeScript, Express.js, Socket.io, React.js

- Full-stack real-time chat app using WebSockets (Socket.io) with namespace and room-based messaging, middleware authentication, and a React view engine for the UI.

2. Library gRPC & HTTP Gateway

Technologies: Node.js, TypeScript, gRPC (@grpc/grpc-js), Express.js, Protocol Buffers, ts-proto

- Book management system using a TypeScript gRPC server exposed via an Express HTTP gateway; full CRUD with pagination, TypeScript types generated from .proto files via ts-proto, and Postman-ready REST endpoints.

3. Weather Forecast Dashboard

Demo: [[link](#)]

Technologies: React, TypeScript, Tailwind CSS, Node.js, Express.js, MySQL, Sequelize, Electron

- Cross-platform desktop and web weather dashboard showing real-time conditions and 5-day/3-hour forecasts with user-specific favorites; full-stack app wrapped with Electron for desktop deployment.

4. Task Reminder System

Technologies: Node.js, TypeScript, Express.js, Sequelize (MySQL), Swagger UI, Cron Jobs

- Backend task reminder system with CRUD operations, cron-based scheduled reminders, Sequelize migrations, pagination, and full API documentation via Swagger UI. Follows standard folder structure with TypeScript.

EDUCATION

BSc (Hons) Computing

Feb 2024 – Present

Islington College | London Metropolitan University | Kamal Marg, Kamalpokhari, Kathmandu

SLC / +2 — Science

2021 – 2023

Uniglobe SS College | NEB | Kamaladi, Kathmandu

TRAINING & CERTIFICATION

- AWS Academy Cloud Foundations
- AWS Academy Data Engineering
- AWS Academy Machine Learning Foundation
- AWS Academy Machine Learning for Natural Language Processing
